

Logic model of the UK Antimicrobial Resistance (AMR) Strategy, 2013-2018

Key area 1: Improving infection prevention and control practices

Key area 2: Optimising prescribing practice

Key area 3: Improving professional education, training and public engagement

Key area 4: Developing new drugs, treatments and diagnostics

Key area 5: Better access to and use of surveillance data

Key area 6: Better identification and prioritisation of AMR research needs

Key area 7: Strengthened international collaboration

**Research may also lead to changes in policy which may affect other elements of the model
